ABSTRACT

[0245] 20

21 An apparatus and method utilizing a network based interactive computer system
22 for project management. Information modules are provided and accessible by authorized
23 project team members to assign tasks, prepare documents, request collaboration for
24 information and issue resolution. Smart electronic mail notifications are provided to
25 enable quick response to notifications with the ability to attach documents. Each user can
26 establish a personal portal defining the manner and which notifications relating to the
 project which each user will receive.
